

FQ5-348

17

WHAT IS CLAIMED IS:

1. A portable communication apparatus having a display[^] and a keypad on a main side of a housing thereof,

wherein the keypad includes a key section comprising at least one key which is used to select a desired information item from a plurality of information items displayed in the display and ~~then to~~ execute a selected information item.

2. The portable communication apparatus according to claim 1, wherein the key section comprises:

that instruct[^]
10 ~~instructing~~ a search direction to select the desired information item from the information items displayed in the display; and
an execution key disposed at a position sandwiched by the plurality of movement operation keys, ~~for executing~~ ^{that executes} the selected information item.

15 3. The portable communication apparatus according to claim 2, wherein the key section ^{comprising} ~~consisting of~~ the movement operation keys and the execution key is disposed ^{apart} ~~with a space~~ from other operation keys of the keypad.

4. The portable communication apparatus according to

FQ5-348

18

claim 1, wherein the key section ^{comprises} ~~consists of~~ a joystick-type key, which is inclined in a desired search direction to select the desired information item and is depressed to execute the desired information item.

5 5. The portable communication apparatus according to claim 4, wherein the key section is disposed ^{apart} ~~with a space~~ from other operation keys of the keypad.

6. A portable communication apparatus having a display, ^{a transmitter} and a keypad on a main side of a housing thereof, the keypad comprising two key sections which are separately provided on the main side,

10 wherein a predetermined one of the two key sections comprises a plurality of key contacts which are used to select a desired information item from a plurality of information items displayed in the display and then to execute a selected information item.

15 7. The portable communication apparatus according to claim 6, wherein the key contacts are a plurality of movement operation key contacts and an execution key contact surrounded by the movement operation key contacts.

20 8. The portable communication apparatus according to claim 7, wherein the predetermined key section comprises:

FQ5-348

19

A a plurality of arrow keys corresponding to the movement operation key contacts, respectively, ^{that instruct} ~~for instructing~~ a search direction to select the desired information item from the information items displayed in the display; and

5 an execution key disposed at a position sandwiched by the plurality of movement operation keys and corresponding to the execution key contact, ^{that executes} ~~for executing~~ the selected information item.

A

9. The portable communication apparatus according to claim 7, wherein the predetermined key section comprises a joystick-type key, which is inclined in a desired search direction to turn on a movement operation key contact corresponding to the desired search direction and is depressed to turn on the execution key contact.

10. A portable communication apparatus having a display, ^{a transmitter} and a keypad on a main side of a housing thereof, the keypad comprising a first key section and a second key section which are separately provided on the main side, wherein

20 the first key section comprises a plurality of key contacts which are used to select a desired information item from a plurality of information items displayed in the display and then to execute a selected information item; and the second key section comprises a ten-key pad,

FQ5-348

20

the portable communication apparatus further comprising:

A ^{that stores}
a memory ^{for storing} a plurality of names and
destination addresses corresponding to the names; and
A ^{that selects}
5 a controller ^{for selecting} a desired name and a
destination address corresponding to the desired name and
A ^{executes}
^{executing} a calling operation according to the destination
address of the desired name according to a series of operations
of the first key section.

10 11. The portable communication apparatus according to
claim 10, wherein the key contacts are a plurality of movement
operation key contacts and an execution key contact surrounded
by the movement operation key contacts.

15 12. The portable communication apparatus according to
claim 11, wherein the first key section comprises:

A ^{that instruct}
a plurality of arrow keys corresponding to the
movement operation key contacts, respectively, ^{for instructing}
a search direction to select the desired information item from
the information items displayed in the display; and

20 an execution key disposed at a position sandwiched
by the plurality of movement operation keys and corresponding
A ^{that executes}
to the execution key contact, ^{for executing} the selected
information item.

FQ5-848

21

13. The portable communication apparatus according to claim 11, wherein the first key section comprises a joystick-type key, which is inclined in a desired search direction to turn on a movement operation key contact corresponding to the desired search direction and is depressed to turn on the execution key contact.
